Prague, Czech Republic

PROFESSIONAL SUMMARY

Full Stack Developer working mainly in React and TypeScript, with a background in multithreaded C#/.NET desktop software integrating directly with hardware. I build and ship my own products end to end, currently a data-heavy web platform backed by a serverless Azure data pipeline and a native Android app, both maintained by me. Two international internships in Spain and Belgium. Based in Prague and available immediately, EU citizen with no visa requirements. I develop with AI coding agents and stay accountable for every line.

CORE COMPETENCIES

React & TypeScript

Next.js

C# / .NET

Multithreading

PostgreSQL

Azure Functions

Terraform

CI/CD (GitHub Actions)

PROFESSIONAL EXPERIENCE

Irisbond Mar 2026 - Jun 2026

Software Developer Intern (C# / .NET)

San Sebastian, Spain

- Engineered "HiruSystray", a multithreaded Windows application in C# for eye-tracking hardware calibration, moving rendering off the UI thread and tripling frame rate from 30 to 90 FPS.
- Implemented advanced gaze-control algorithms (Dwell) with custom cursor-smoothing filters and tolerance zones to achieve 100% accessible navigation.
- Developed real-time video/avatar positioning modules and interactive calibration UI components used by global assistive technology clients.

Smartends Mar 2025 - Jun 2025

Software Developer Intern (Python / IoT)

Ghent, Belgium

- Developed IoT backend modules in Python to process high-frequency sensor data for waste management and route optimization.
- Optimized a real-time monitoring platform visualizing fill levels, geographical patterns and collection schedules, reducing data processing latency.

SELECTED PROJECTS

HUNTR - Equity Research & Valuation Platform huntrvalue.me

Built, shipped and maintain a production research terminal for individual investors: financial statements, earnings history and call transcripts, a screener across 800+ tickers, and portfolio tracking with time-weighted return measured against the S&P 500. Designed a valuation suite (DCF scenarios, Monte Carlo, reverse DCF) that traces every input back to the SEC filing it came from, and refuses to display a figure when the underlying data does not reconcile. Built a comparison engine charting up to 4 companies across 50 metrics and 20 years of quarterly, TTM and annual data, kept responsive under heavy data loads. Built a nightly serverless pipeline on Azure Functions that ingests SEC EDGAR financial data for 890+ companies into PostgreSQL (190k+ rows per full load), provisioned with Terraform and deployed through GitHub Actions using OIDC, managed identities and Key Vault, with no stored credentials.

React, TypeScript, Next.js, Supabase (PostgreSQL), Azure Functions, Terraform, REST API

Oroi - Android Subscription Tracker github.com/igarridosi/OroiApp

Built and published a fully offline native Android app for tracking recurring subscriptions, with manual entry by design so users notice what they pay for; all data stays on the device (Room, SharedPreferences), with no account, no analytics and no internet permission. Scheduled renewal reminders with WorkManager two days before each charge, and added a home-screen widget for upcoming payments, a monthly budget with live progress tracking, and CSV export through the Android share sheet. Drew a custom animated donut chart with the Compose Canvas API, designed a Material 3 light/dark theme, and localized the app into English, Spanish and Basque with in-app language switching.

Kotlin, Jetpack Compose, Material 3, Room, WorkManager, Android SDK

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Kotlin, Python

Frontend & Desktop: React.js, Next.js, HTML, CSS, Sass, Tailwind CSS, Material UI, Jetpack Compose, WPF

Backend & Databases: C# (.NET Core), SQL (PostgreSQL), Node.js, RESTful APIs

Architecture & UX: Asynchronous Systems, Multithreading, Performance Optimization, Responsive Design, UI/UX Development

Cloud & IaC: Azure (Functions, Key Vault, Blob Storage, Application Insights), Terraform

Tools & DevOps: Git, Docker, GitHub Actions (CI/CD, OIDC), AI-assisted Development (Claude Code)

Spoken Languages: Spanish (Native), Basque (Native), English (C1, Advanced), Czech (A1, learning)

EDUCATION

Higher Technician in Cross-Platform Application Development (EQF Level 5) [IES Xabier Zubiri Manteo, San Sebastian, Spain](#) 2024 - 2026

Two-year vocational degree, 2,000 hours including a supervised industry placement. Concurrency, multithreading and sockets; multimedia and mobile programming; data access and persistence layers; interface development; databases.

Higher Technician in Web Application Development (EQF Level 5) [IES Xabier Zubiri Manteo, San Sebastian, Spain](#) 2022 - 2024

Two-year vocational degree, 2,000 hours including a supervised industry placement. Client-side (JavaScript) and server-side web development; HTML, CSS, usability and accessibility; deployment and server configuration; relational databases.

REFERENCES

David Ruiz Osés CTO, Irisbond (direct supervisor)

"He doesn't hesitate to ask when needed, but quickly takes the initiative and solves problems independently."
